

LIGHTING THE WAY FOR PROFESSIONALS

LIGHTING PRO TECHNOLOGY™

TOOLS...NOT TOYS™

GET BETTER, BRIGHTER, LONGER-LASTING LIGHT WITH LIGHTING PRO TECHNOLOGY™

Lighting Pro Technology™ specializes in high-reliability, flexible, durable yet portable lighting tools for critical-industry professionals — *tools...not toys.™*

For over 25 years, U.S. Forest Service firefighters have come to depend on Lighting Pro Technology's HEADLITE™ to help

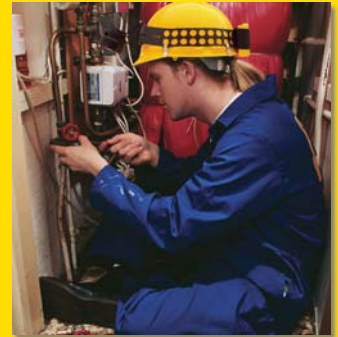

light the way. Damage Control Officers (DCOs) on U.S. Navy ships have been specifying our HEADLITE for shipboard use for over 15 years. Other demanding users include fire and EMS professionals; search and rescue teams; police, security and law enforcement agencies; utilities and public services departments; manufacturing companies; industrial maintenance and repair operations, and health and safety personnel.

All Lighting Pro Technology products offer uncompromising quality and superior performance. These are rugged, pro-quality lighting tools with some very unique features. For example, unlike ordinary flashlights, Lighting Pro Technology lights are non-dimming and will provide a constant level of brightness (i.e. useable light) that lasts up to 8× longer!¹ (See charts at right.) Battery pack options are available that will extend the effective burn time beyond 16 hours.

The innovative technology we've built into our products provides even greater value to those who demand tools that perform. Whether your application is safety or security, professional or recreational, you deserve to experience the Lighting Pro Technology difference! For more dependable, higher quality, and longer useable light — choose Lighting Pro Technology.

Lighting Pro Technology products feature:

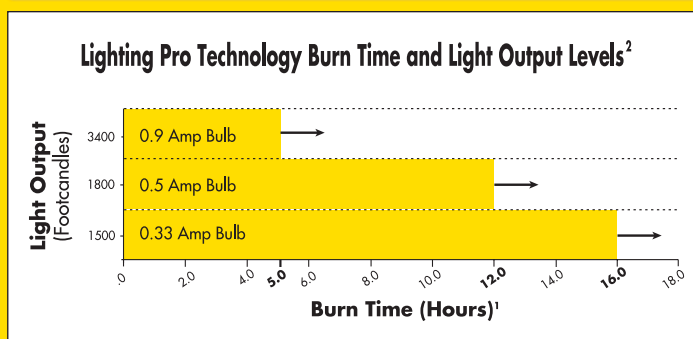

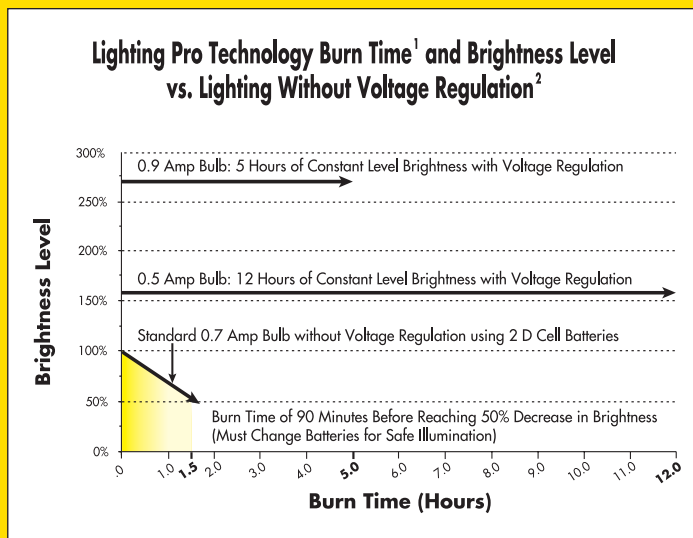

- A built-in micro processor voltage regulator that provides:
 - 1) A constant level of brightness, with no dimming.
 - 2) Multiple light levels to conserve battery power.
 - 3) A bulb-protecting "soft start" for longer bulb life.
 - 4) Low-battery advance warning pulse indicator.
- Unique optical chamber for a shadow-free beam.

- A variety of bulbs and user-friendly longer-life battery pack options.
- Rugged, durable construction, yet still very lightweight.

The advantages of Lighting Pro Technology products include:

- Reliability. Longer useable light that won't dim or go out without warning.
- Durability. Rugged lighting tools geared for professional users.
- Flexibility. Multiple design options to meet your specific requirements.
- Low total cost of ownership. Save up to 80% on battery replacement costs.
- Easy to use.
- Environmentally safer. Fewer batteries to dispose of.

¹Frequency of use, storage and operating conditions will have an impact on the useful life of your batteries, which may vary.

²Charts show results using 8 standard AA batteries unless otherwise noted. Longer burn time available with higher capacity battery pack options.

Remember: when you're
relying on a light to do your job,
insist on useable light...
insist on a constant level of brightness.

Lighting Pro Technology.
Because seeing is believing.
